

# TASK 1

Design & build a working prototype of a minimal e-commerce experience for an F1-inspired streetwear brand in Framer, focusing on structure, UX clarity, and smart time use—not volume. Show me why your approach stands out.

## 1. Required Pages / Flows

### 1.1 Home Page

- View all button below hero section that will take us to products page.
- Category Section: List **≥5 categories** (e.g., Tees, Jackets, Caps, Accessories, Limited).
  - ◆ Clicking the *first* category must navigate to its **Category Page** (see below). Other categories can be non-functional placeholders (but styled consistently).

## 2. Category Page (for the first category only)

- 2.1 Grid/list of products (placeholder images ok).
- 2.2 Clicking a product opens the **Product Page**.

## 3. Product Page

**3.1 Search Input** (same page) with an **empty state message** when no items match, while still showing remaining items that do match. If a query yields zero results overall, show a clear empty message.

## 4. Cart Page

- 4.1 List of added items
- 4.2 Quantity adjust
- 4.3 Subtotal placeholder.
- 4.4 Checkout CTA (no checkout flow needed).

## 5. Authentication Pages

- 5.1 Login Page
- 5.2 Sign Up Page
- 5.3 Forgot Password Page with OTP via Email option:
  - User opts to receive OTP via email.
  - After entering correct OTP, allow resetting password
- 5.4 Data Capture to Google Sheet:

**Important Clarification:**

If you place icons/links for additional features (e.g., Wishlist, Profile), you **do not need** to build those extra pages. Presence + consistent design is enough. Show breadth *without* wasting time duplicating structures.
